

T SPORT BERNAU SUSTAINABILITY POLICY

T Sport Bernau is committed to reducing the environmental impact of its operations by collaborating with our team members, partners and the championship promotor to make the team more sustainable. In this document we would like to outline the actions we take in order to reduce the environmental impact of our race team whilst competing within the FIA European Truck Racing Championship.

We are a professional, young and forward-thinking truck racing team who appreciate the rising importance of sustainability both within motorsport and the wider automotive, commercial vehicle and transport industries. We have already made several changes to our operations in order to become more environmentally friendly and we strive to continue to make more changes in the future based on the best available and economically feasible technology available.

To reduce the environmental impact of our activities and operations, T Sport Bernau is committed to:

- x Reduce the CO2 footprint created by our activities, with particular focus on the logistics of our operation combined with running our race truck on 100% renewable biofuel.
- x Monitor the use of energy and make sure our workshop is using 100% green electric.
- x Source local and environmentally friendly products and materials as much as possible.
- x Educate and motivate team members to carry out tasks in an environmentally responsible manner.
- x Focus on generally reducing waste and recycling as much as possible.
- x Reduce water usage by collecting and using rain water at our workshop.
- x Work with partners and contractors that value our aims and work with us in order to reach our targets.
- x Organise joint transport to events for team members and inform team guests about public transport options.

Our objectives are:

- x To implement new technologies such as the use of an electric or hydrogen driven tractor unit to reduce our carbon footprint even more, latest by 2030.
- x To use a carbon emission calculating system to help manage our carbon footprint monitoring by 2025.
- x To reduce waste and increase waste recycling by a further 15 % in the next 2 years, with a special focus on waste generated at the circuit.
- x To lower our energy consumption, for example by upgrading machinery and appliances to highest efficiency standards during the next 5 years.
- x If financially visible choose environmental and sustainable products in both, the workshop and office, every time orders are made from 2024.
- x To increase staff training on how to use materials efficiently and reduce material waste in the next 2 years.
- x To reduce our water usage especially at the circuit by 30 %, latest by 2026.
- X To raise awareness with the event organisers with regards to ground and water pollution and try to increase spill kit availability for larger oil and fuel spillages in the paddock during the 2024 season.

We will also actively work with and support our promotor ETRA who are working towards net zero emissions in our championship by 2038.

The above objectives will be monitored and enforced by Melanie Derflinger.

This sustainability policy and the achievement of the established goals will be reviewed periodically. We ask for everyone's collaboration in order to be successful in this commitment to sustainability.

Melanie Derflinger
Managing Director & Environmental Officer T Sport Bernau
